purenet

A file sharing platform and FTP server that has random files. It is a fast FTP server with files and it shows the context of the local disk (D:\). It is currently in beta. All users are welcome.

Users (FTP) :

User	Password	Description					
61449	(private)	The creator of the server					
anon	No	New user					
Android	No	Android user					

Quick Setup : Go to https://github.com/CdDw-HQ/purenet and download the D_drive folder. Create a new Disk Drive with the letter D:\. Move the D_drive folder to the D:\ drive and copy the contents inside it. Delete the folder in the D:\ Drive and paste the contents. Then you're done.

This is all for the instructions. Use the server properly and don't break it.

Proper use : Do not insert illegal file names. Don't put forbidden files. Don't leak the password of the 61449 account. Do not hack the FTP Server in any way such as a fake index.php file. You may not set the FTP Server disk (D:\) to FAT32. Only use a existing account, FTP Servers aren't a Service Login Website like google. Admins may not set the home directory to other directories. Do not overwrite the file server or the FTP Servers host. Improper Use may lead to a 1 hour ban.

purenet in Bash/WSL : Open up a bash terminal like WSL and type cd D:\ . You can create custom files from there if you want. Here's a list of commands :

mkdir Folder

touch File.txt

rmdir Folder

rm -r Folder

ftp

cmd
